...Expect success!

IT Experience At Work For You

Are you consistently meeting your Service Level Agreements with customers?

“On time, within budget.” It’s an eternal struggle, and for many IT organizations, it seems out of reach.

What is standing in the way of your success?

The same key factors govern the maturity of an organization’s IT capabilities, whether primarily legacy systems or cutting-edge e-business.

Success (ROI) Is A Choice

Would you rather have your IT staff efficiently moving forward toward strategic goals, or fighting fires, wasting resources, and diluting ROI?

The path out of chaos can be charted via the SEI Capability Maturity Model, and although it requires discipline and a serious long term commitment, the rewards are great, even at Level 2: repeatable processes that are independent of individual heroics. Yet many organizations fail to attain Level 2 or stay there, for a variety of reasons.

Astrue Consulting Services offers experience-driven services tailored specifically at developing the value-added capabilities that elevate your organization to that next level:

Requirements Management

We can give you tight linkage between your requirements and test cases, requirements that are granular and specific, in a change-controlled environment. If you leave the starting line without a laser focus on the target, do you really like your odds of getting there?

Project Management

Let our experienced professionals employ proven PM processes and the PMI methodology to keep your projects on schedule and budget.

Quality Assurance/Management

We can deliver a QA Plan and processes to support it.

Change Management

Renew your commitment to proactively control change and keep it from derailing your projects.

Software Configuration Management

It’s more than having tools like CVS, especially in an integrated environment.

Assessment

Arrange to have a written evaluation of some part (or all) of your organization relative to one or more of these key capabilities. Just think of what you could do with that information!

Is your IT organization delivering increasing value (ROI)? Or are projects often late and over budget?

Complete Software Development

Whether you are using RUP, XP, or a more traditional SDLC, we understand the critical success factors and can deliver all phases of a software project (development, re-engineering):

- Analysis and Requirements
- Business and Technical Design
- Construction and Testing
- QA and Implementation
- Training and Documentation

Don’t be fooled- Java, C#, or whatever the tool or language *du jour* may be, there’s nothing special or magic about these skills that a talented IT pro cannot learn rapidly and put to immediate use.

Testimonials: Our Clients Said...

“thorough knowledge in this area. Wide technology knowledge, from mainframe to client/server and web systems. ...totally dedicated to deliver. On repeated occasions, you have gone beyond the call of duty to deliver and meet customer expectations.”

—Cynthia C., Program Manager

“...strong systems architecture knowledge yields comprehensive detailed testing plans, QA plans and implementation of appropriate IT metrics.”

—Tony A., Project Manager

An experienced IT professional who sees the big picture can help you take your organization to the next level. Contact us today to see how we can help you keep your commitments to deliver on the promise of technology.
